

## Incident handler's journal

<b>Date:</b> 07/23/2023	<b>Entry:</b> #1
Description	<ul style="list-style-type: none"><li>• A small U.S. health care clinic experienced a security incident on Tuesday at 9:00 a.m. which severely disrupted their business operations.</li><li>• The cause of the security incident was a phishing email that contained a malicious attachment. Once it was downloaded, ransomware was deployed encrypting the organization's computer files.</li><li>• An organized group of unethical hackers left a ransom note stating that the company's files were encrypted and demanded money in exchange for the decryption key</li></ul>
Tool(s) used	VirusTotal
The 5 W's	<p>Capture the 5 W's of an incident.</p> <ul style="list-style-type: none"><li>• <b>Who</b> caused the incident? A group of unethical hackers.</li><li>• <b>What</b> happened? Employees were unable to use their computers and access their files, due to a ransomware attack that had infected several systems.</li><li>• <b>When</b> did the incident occur? The incident happened at 9:00am.</li><li>• <b>Where</b> did the incident happen? A small U.S. health care clinic specializing in delivering primary-care services.</li><li>• <b>Why</b> did the incident happen? An employee was the target of a phishing email. This could be due to a lack of awareness around phishing attack techniques.</li></ul>
Additional notes	The organization should implement a cybersecurity training and awareness

	program for its employees so that they are better prepared for this in the future and can hopefully prevent it from happening again.

<b>Date:</b> 7/31/2023	<b>Entry:</b> #4
Description	The organization experienced a security incident on December 28, 2022, at 7:20 p.m., PT, during which an individual was able to gain unauthorized access to customer personal identifiable information (PII) and financial information.
Tool(s) used	The vulnerability scanner was used to identify the vulnerability in the e-commerce web application that was exploited by the attacker. The security team also used an incident response plan to guide their response to this incident. The plan included steps for containing the incident, investigating the incident, and remediating the vulnerability.

The 5 W's	<p>Capture the 5 W's of an incident.</p> <ul style="list-style-type: none"> <li>• The incident was caused by an individual who exploited a vulnerability in the organization's e-commerce web application.</li> <li>• The attacker was able to gain unauthorized access to the organization's e-commerce web application and access customer purchase confirmation pages. The attacker then collected and exfiltrated customer data, including personal identifiable information (PII) and financial information.</li> <li>• The incident occurred on December 28, 2022.</li> <li>• The incident occurred on the organization's e-commerce web application.</li> <li>• The incident happened because of a vulnerability in the organization's e-commerce web application. The vulnerability allowed the attacker to perform a forced browsing attack and access customer transaction data by modifying the order number included in the URL string of a purchase confirmation page.</li> </ul>
Additional notes	<ul style="list-style-type: none"> <li>• The incident was first discovered on December 28, 2022, when an employee received an email from an external email address claiming that they had stolen customer data.</li> <li>• The security team investigated the incident and determined that the attacker had gained unauthorized access to the organization's e-commerce web application by exploiting a vulnerability in the application.</li> <li>• The attacker was able to access customer purchase confirmation pages, exposing customer data, which the attacker then collected and exfiltrated.</li> <li>• The organization has taken steps to prevent future recurrences of this incident, including performing routine vulnerability scans and penetration testing, and implementing access control mechanisms.</li> </ul>

### Reflections/Notes:

1. Were there any specific activities that were challenging for you? Why or why not?

The difficulties that I experienced during these activities were in the usage of VirusTotal. VirusTotal has many features that I have never seen before and because of this, the analysis part of the activities were more challenging.

2. Has your understanding of incident detection and response changed since taking this course?

Yes, my knowledge and understanding of incident response has grown since taking this course. Before taking this course I was not aware of the 5 W's and how this helps security analysts perform incident response. Although it is not necessary, it is still a good starting point. By asking these questions, a security analyst can gather the information they need to effectively respond to an incident.

3. Was there a specific tool or concept that you enjoyed the most? Why?

I enjoyed using the Chronicle SIEM tool created by Google. It was my first time utilizing this tool to perform search queries and it was rather robust with its many features.
